

# Steel Scarifier Cutters

## Where to use them...

- General cleaning of concrete and asphalt surfaces.\*
- Traffic line removal.
- Paint and light coatings removal.
- Adhesives removal.
- Stripping of compacted dirt, grease and oil deposits.
- De-rusting, de-scaling on ship decks.

## And why.

- Inexpensive.
- Versatile; do most jobs.
- Leave an extremely smooth surface.
- Last longer, save downtime vs. other steel cutters.
- Especially effective on layered dirt and grease.
- Available in blunt or sharp tooth configurations.
- Fit all machines.

Manufacturing cutters since 1947  
 All size milling cutters available  
 All dimensions are approximate only  
 Spacers and shafts available for all brands of machines  
 \* Exceptional results

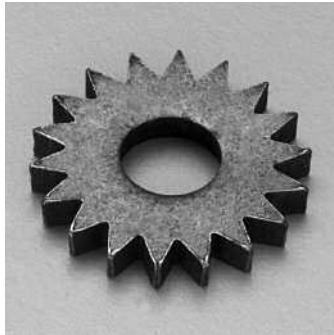

# Steel Scarifier Cutters

**If you really know your cutters, you'll never use any others.**

It's the age-old question. Price vs. quality. If you buy on price alone, you're going suffer on quality. If you buy the best, you might have to pay a little more. The good news is that, with Kut-Rite, it's very little more. And the fact that Kut-Rite cutters work so much harder and last so much longer makes the choice a no-brainer.

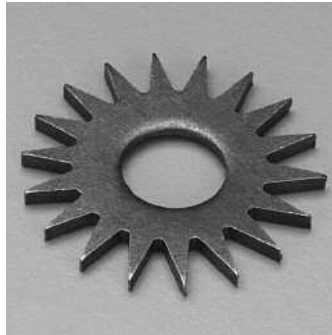

**Let's cut to the chase...**

Take this simple test. Hold a Kut-Rite cutter in your hand, then do the same with a comparable cutter from any of our competitors. You'll be able to feel the difference right in the palm of your hand. Which cutter would you rather have working for you?

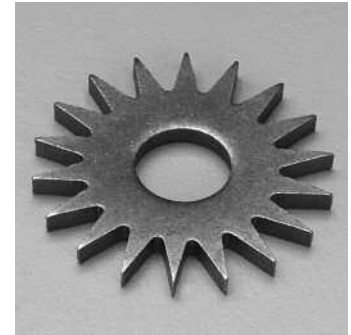

**18 SHARP TEETH**

**PART NO. .... FLUE CUTTER**  
 OD ..... 1-1/4"
